## EDUCATION

### Bachelor of Science Honours in Information Technology

SLIIT

In Progress

### Advance Level Sri Chandananda Buddhist College

2019 - 2022

## SKILLS

- Software Testing Life Cycle
- Manual & Automated Testing
- Test Case Writing & Execution
- Bug Tracking & Reporting
- API Testing (Postman)
- Performance & Security Testing
- Critical Thinking & Analytical Mindset
- Communication & Team Collaboration
- Time Management

## LANGUAGE

- English
- Sinhala

## PROFILE

A detail-oriented 3rd-year IT student at SLIIT passionate about software quality assurance and testing. Skilled in manual and automated testing, ensuring bug-free, high-performing applications. Proficient in using Postman for functional, performance, and API testing. Strong understanding of test case creation, debugging, and defect tracking to ensure product reliability. Dedicated to delivering seamless user experiences by identifying and resolving software issues efficiently. Committed to maintaining high standards of software quality through thorough testing methodologies and continuous improvements

## PROJECTS

### Online Glass Store Management System

2024

In this project, I worked on the **financial part**, using tools like POSTMAN, Visual Studio, React JS, and MongoDB. I handled tasks like payment processing, generating invoices, and keeping track of financial records. The project uses the MERN stack, making it a strong and scalable solution for managing the online glass store.

### Online hotel Reservation System

2024

For this project, I worked on the **financial section** using Visual Studio and Workbench. My job was to manage payments, handle reservations, and make sure everything was billed correctly. The system allows users to book rooms easily, and the financial part ensures accurate payments and invoices. We had to use java, java script, HTML & CSS

### To Do List APP

2024

I developed a To-Do List app using Android Studio, incorporating Kotlin coroutines and libraries for efficient background task management. The app allows users to create, update, and delete tasks with a smooth, responsive experience. It's designed to help users stay organized, with features that enhance performance and task management.
